**Develop a pseudo Full Stack Web Application for Event Registration.**

On Front End:
- Your web app should ask users to fill up their details for event registration.
- Once the details are provided, they should be able to preview it on a different screen before submitting.
- Once submitted show the registration number on the success screen.
- Should provide admin login.
- Should provide UI for Admin level operations mentioned below.

On Back End:
- Receive all the event registration details from the Front End and store them in a database.
- Generate Registration Number for the request and store it in database.
- Render different types of requests like for the event registration, data for Admin etc.
